## Blanket Weed

500ml -	Ref: 3042CW	5,000 litres x 2 doses.
1000ml -	Ref: 3041CW.	10,000 litres x 2 doses.
2500ml -	Ref: 3043CW.	25,000 litres x 2 doses.
5000ml -	Ref 3045CW.	50,000 litres x 2 doses.
10000ml -	Ref 3046CW.	100,000 litres x 2 doses.

Blanket Weed is a filamentous algae and a common problem in many garden and ornamental ponds. It thrives on warmth, sunlight and nutrients within the pond water and can make the pond look unsightly. It also chokes the growth of pond flora and fauna and in severe cases fish, especially Sterlet species, can become tangled within it.

ClearWaters Blanket Weed is safe to use with ultra violet clarifiers and biological filtration systems, and there is no need to switch off UVC's during the treatment process. Safe with all pond fish, plants and wildlife including birds and pets which may drink from the water.

Add 25ml of Blanket Weed per 500 litres of pond water. Mix the solution in a bucket or watering can and distribute evenly over the pond surface and watercourses if present, but avoid direct contact with water plants. Repeat the process again in 14 days in order for the solution to work most effectively.

On day 28 of treatment, add 25ml for every 2000 litres and repeat every 2 weeks thereafter.
